Luke Forte

I will be using Azure to deploy the container to the cloud.

Step 1:

Log onto Azure, and create a public repository.

Step 2:

Create a container app resource.

Step 3:

Create a resource group

Step 4:

Go into app settings, and unselect docker quickstart image, and select dockerhub. Filling in data regarding the image to use.

Step 5:

Allow ingress, and allow ingress from any location. Setting the port to 8080 and hit create.
